

## FREQUENTLY ASKED QUESTIONS !

Siamsoft.NET Accounting Enterprise 2005 is a complete accounting system with source code and distribution rights for the Dot Net Environment. This system is multi-tiered, with a Database back-end in SQL Server 2005 or SQL Server Express 2005, a business logic layer implemented as a web service, and two presentation layers, an Internet-Based ASP Dot Net presentation layer, and a VB Dot Net Desktop Shell presentation Layer. For more information, please review the material below.

Siamsoft.NET Accounting Enterprise 2005's multi-tier design separates the Interface (Presentation Layer) from the Business Logic and the Database Layer, so the system can be easily adapted to environments or easily scaled across multiple systems.

The Multi-tier design of the Siamsoft.NET Accounting Enterprise 2005 application allows for unlimited scalability.

A complete list of the system functions, including a full system overview, detailed technical specifications, database schema, Ledger Posting Guide, sample source code from all of the system's layers, and other technical documentation can be found on-line in the Enterprise Help System.

<http://www.auramsiam.com>

The complete Siamsoft.NET Accounting Enterprise 2005 source code, including the project files, and all the source code for every layer in every tier, is included with the package, so you can modify it and customize it to exactly meet your organizations needs.

## Siamsoft.NET Accounting Enterprise Integration Features:

Siamsoft.NET Accounting Enterprise 2005 is designed with ease of modification and enhancement in mind. For example, each function in the system has its own set of stored procedures to process its data to minimize the system-wide impact any changes you make may have on the overall operation of the program.

We have also designed the system with integration in mind. For the most part, passing transactions to the Enterprise System for processing is just a matter of populating a record and making a single call to a stored procedure.

Here are some other features that make Siamsoft.NET Accounting Enterprise 2005 easy to work with:

- Fully Implemented in Dot Net Framework
- No Third Party Tools Required
- Complete Database Schema Available
- Quick How-To Guide to help with Common Changes
- Developer Videos Showing Common Tasks
- Plain English Descriptive Variable Names
- Plain English Descriptive Table Names
- Plain English Descriptive Field Names
- Simple Forms defined in XML
- Business logic in Stored Procedures

We have made public a lot of technical information about the design of the software, please review the "Technical Reference Guide" in the Siamsoft.NET Accounting Enterprise 2005 Help System at:
